# IMPORTANT PRODUCT ANNOUNCEMENT

August 1, 2009

After 2 years of additional research on the effects of Eclipse® vs E2® on Tin Oxide coated sensors, we have concluded that ***Eclipse is every bit as safe as E2*** and evaporates twice as fast. In addition, we have reformulated Eclipse so it now contains less than 1 part per million of contaminant making it the purest sensor cleaning agent available on the market today.

As a result we will discontinue E2. We officially recommend that Eclipse be used on ALL sensors but will of course continue to honor our guarantee against sensor damage, regardless of the camera or fluid used - whether Eclipse or E2.

Sensor Swab Plus® and Digital Survival Kits® will exclusively contain Eclipse.

Sensor Swab® Plus and Digital Survival Kits will still be available with E2 while supplies last
